Common Otology Audit

Level 1 - Welcome

Enter Patient Code to review:

Click to create New Case:

Create New Case (PreOp)

Notice:
Hospitals that do not routinely enter 3KHz readings have been unable to obtain a mean calculation of the audiogram (the system returns null because one of the values included in the mean calculation is null), so it has been decided that a 3KHz reading should be estimated if none is available. In the past some users have estimated their own readings, but there now exists a function within the system that will uniformly calculate and enter a missing 3KHz reading when the user enters 'N/A' in the 3KHz boxes. The formula takes the average of the 2KHz and 4KHz readings.

Users should NOT enter their own estimated values.
Note also that in order for this to work for Level 1 users we have had to include the 4KHz BC reading (previously not recorded). The pro forma has also been amended to reflect this change.
Please direct any comments or queries to the web master or project leader.
